

Privacy Policy & Terms of Service Implementation

This is a critical requirement. According to the evaluation guidelines, missing or inadequate legal pages (like empty placeholders) will lead to **project rejection**. We need to demonstrate that our application handles user data responsibly and has clear rules of engagement.

What exactly are these?

1. **Privacy Policy:** A document that informs users about what data we collect (e.g., email, login), how we use it, and how we protect it. This is a legal requirement under GDPR.
2. **Terms of Service:** A contract between us and the user. It defines the rules for using our app (e.g., no hacking, no harassment).

Definition of Done (Success Criteria)

- **Accessibility:** Links to both pages must be easily accessible (ideally in the application footer).
- **Content:** No "Lorem Ipsum". The content must be relevant to our project (include app name, contact info).
- **Integration:** The pages must be properly styled and look like a part of our app.
