

SkillUp

Smart Skill Development Platform

Project Introduction

SkillUp is a web application designed to help users develop their skills in a structured, simple, and motivating way.

The goal of the platform is to combine learning, tracking progress, and AI support in one place, making self-development more effective and engaging.

Goal of the Application

1

Help users build habits and improve skills consistently

2

Provide clear progress tracking

3

Offer AI-based support and personalized guidance

4

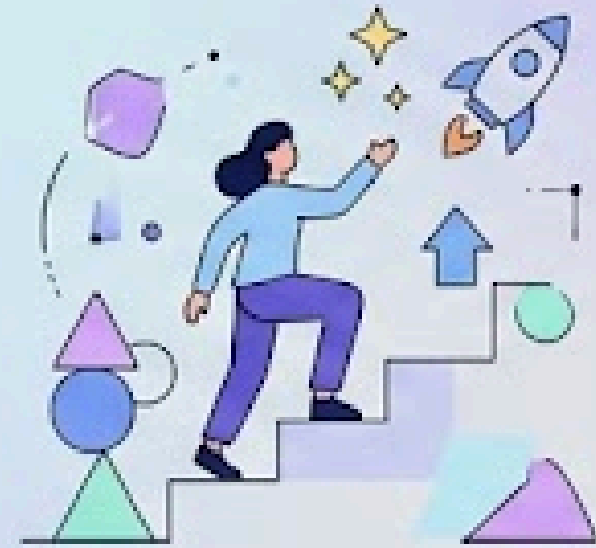

Create a community space for users with similar goals

The platform focuses on both productivity and mental support during the learning process.

Core Features

1. User Onboarding

- Account creation (email)
- Initial dialog:
 - “What do you want to learn?”
 - “What is your goal?”
- Personalized setup from the beginning

Welcome to SkillUp

Improve Skills

Core Features

2. Skill Planner & Calendar

- Users can plan training sessions
- Daily/weekly calendar view
- Ability to review each day:
 - What was done
 - How it went

18:00							
20:00							
21:00							
22:00							

Selected Day:

Monday, May 13

Planned:

Planned: Coding Practice
(08:00-10:00) | Completed 🕒

Planned: Gym: Upper Body
(11:00-12:30) | Missed ❌

Planned: English Lesson
(14:00-15:00) | Completed 🕒

Upcoming Tasks

Finalize Portfolio
Today, 10:00 AM

Yoga: Flexibility
Tomorrow, 7:00 AM

Review React Hooks
Fri, 1:00 PM

Core Features

3. Progress Journal (Key Feature)

- After each session user fills a form:
 - What they practiced
 - How they felt
 - Problems they had
 - Add photo (optional)
- Builds a history of improvement

Journal Your Progress

Thursday, Oct 26th

Post-Session Journal

Session Completed! 🎉

What did you practice?

e.g., Practiced JavaScript React hooks for 45 minutes...

How did you feel?

Angrily

Disappointed

Happy

Concentrated

Extensive

What problems did you encounter?

e.g., Had trouble understanding useCallback...

AI Support System

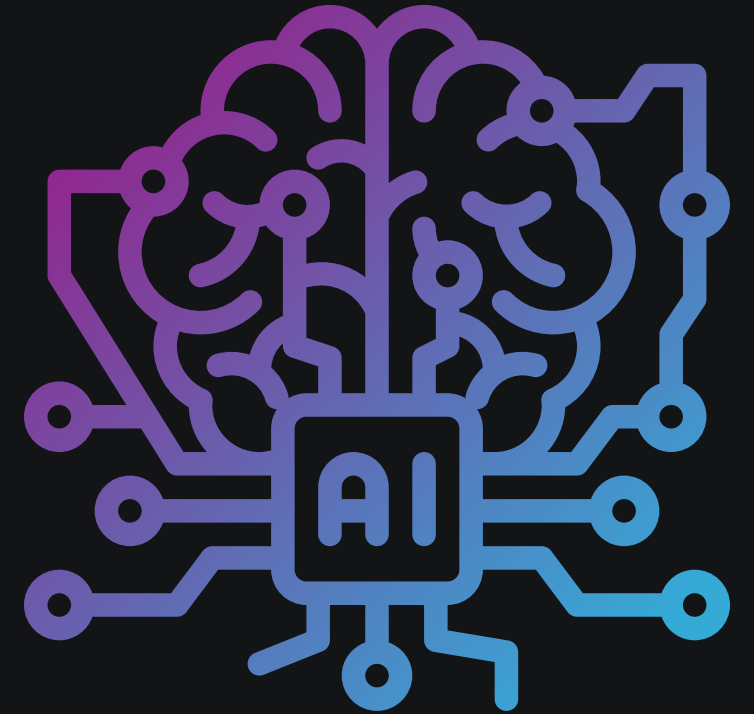

AI is a central part of the application.

It helps users by:

- Answering questions
- Giving advice when user is stuck
- Suggesting next steps
- Sending learning materials:
 - videos
 - articles
 - exercises

This can be implemented as:

- LLM system
- Recommendation system
- (matches AI module from subject)

Alex R.

I don't understand arrays. Can you explain?

SkillUp AI

No problem, Alex! In programming, an array is like a list of items. Here's a basic overview...

- Arrays let you store multiple values under a single name.
- Here are some steps to understand them better:
 1. Watch a short video
 2. Try an interactive exercise
 3. Review a code example.

Explain with examples

Give me a practice exercise

Ask for help

Ask a question (e.g., "What is a loop?")

Progress Tracking

Users can clearly see their growth:

- Progress charts
- Training streak (consistency)
- History of entries
- Visual comparison (e.g. photos)

This keeps users motivated and aware of their improvement.

Community & Groups

- Thematic groups (e.g. gym, coding, language learning)
 - Chat between users
 - Sharing experiences
 - Asking questions to peers
- fits perfectly with:**
- user interaction module
 - real-time chat (WebSockets)

Modules (Based on Subject)

Web

- Frontend (React)
- Backend (NestJS)
- Real-time features (chat, updates)

User Management

- Accounts, profiles, avatars
- Friends / social features

Artificial Intelligence

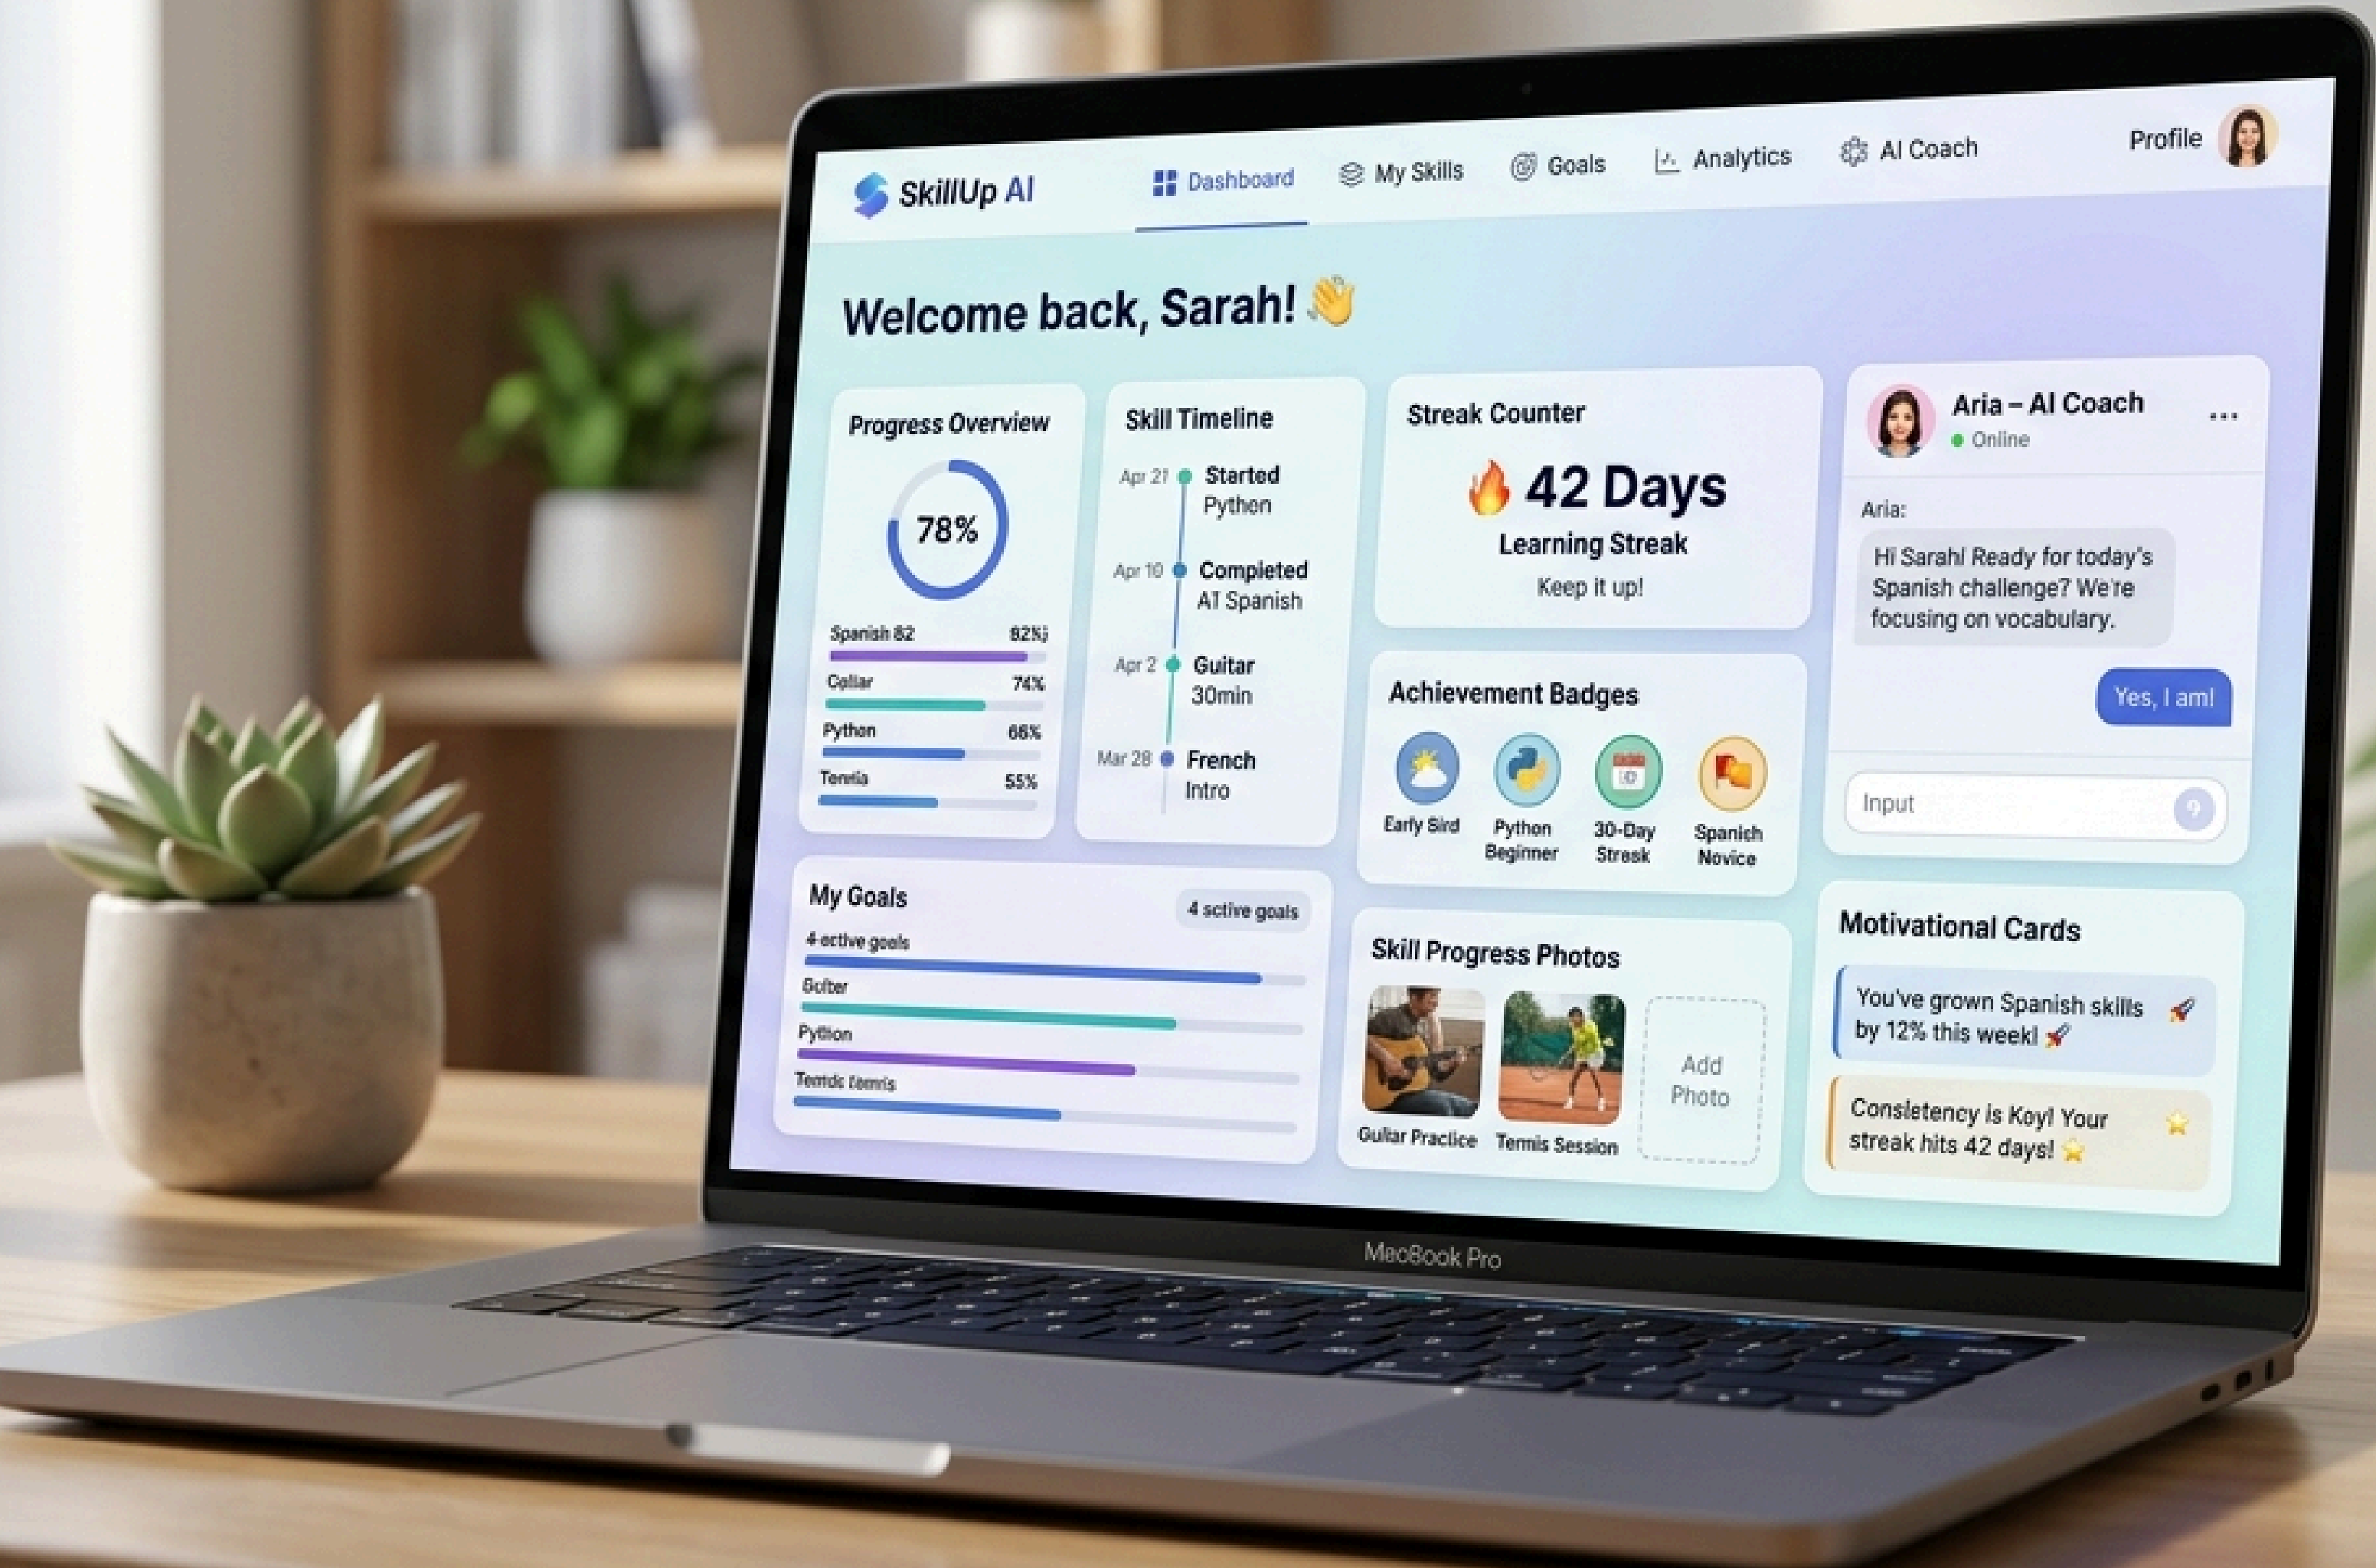

- AI assistant (LLM)
- Recommendation system

Data & Analytics

- Progress charts
- User statistics dashboard

Additional

- File upload (photos)
- Notifications system
- Gamification (streaks, achievements)

You've grown Spanish skills by 12% this week! 🚀

Consistency is Key! Your streak hits 42 days! ⭐

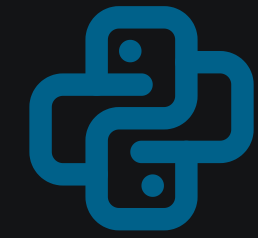

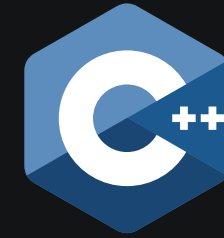

Summary

SkillUp is:

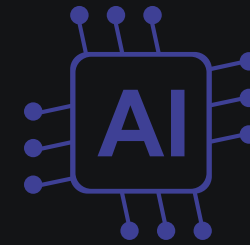

- A skill tracking platform
- With AI support
- And community interaction

It helps users:

stay consistent
track progress
improve faster

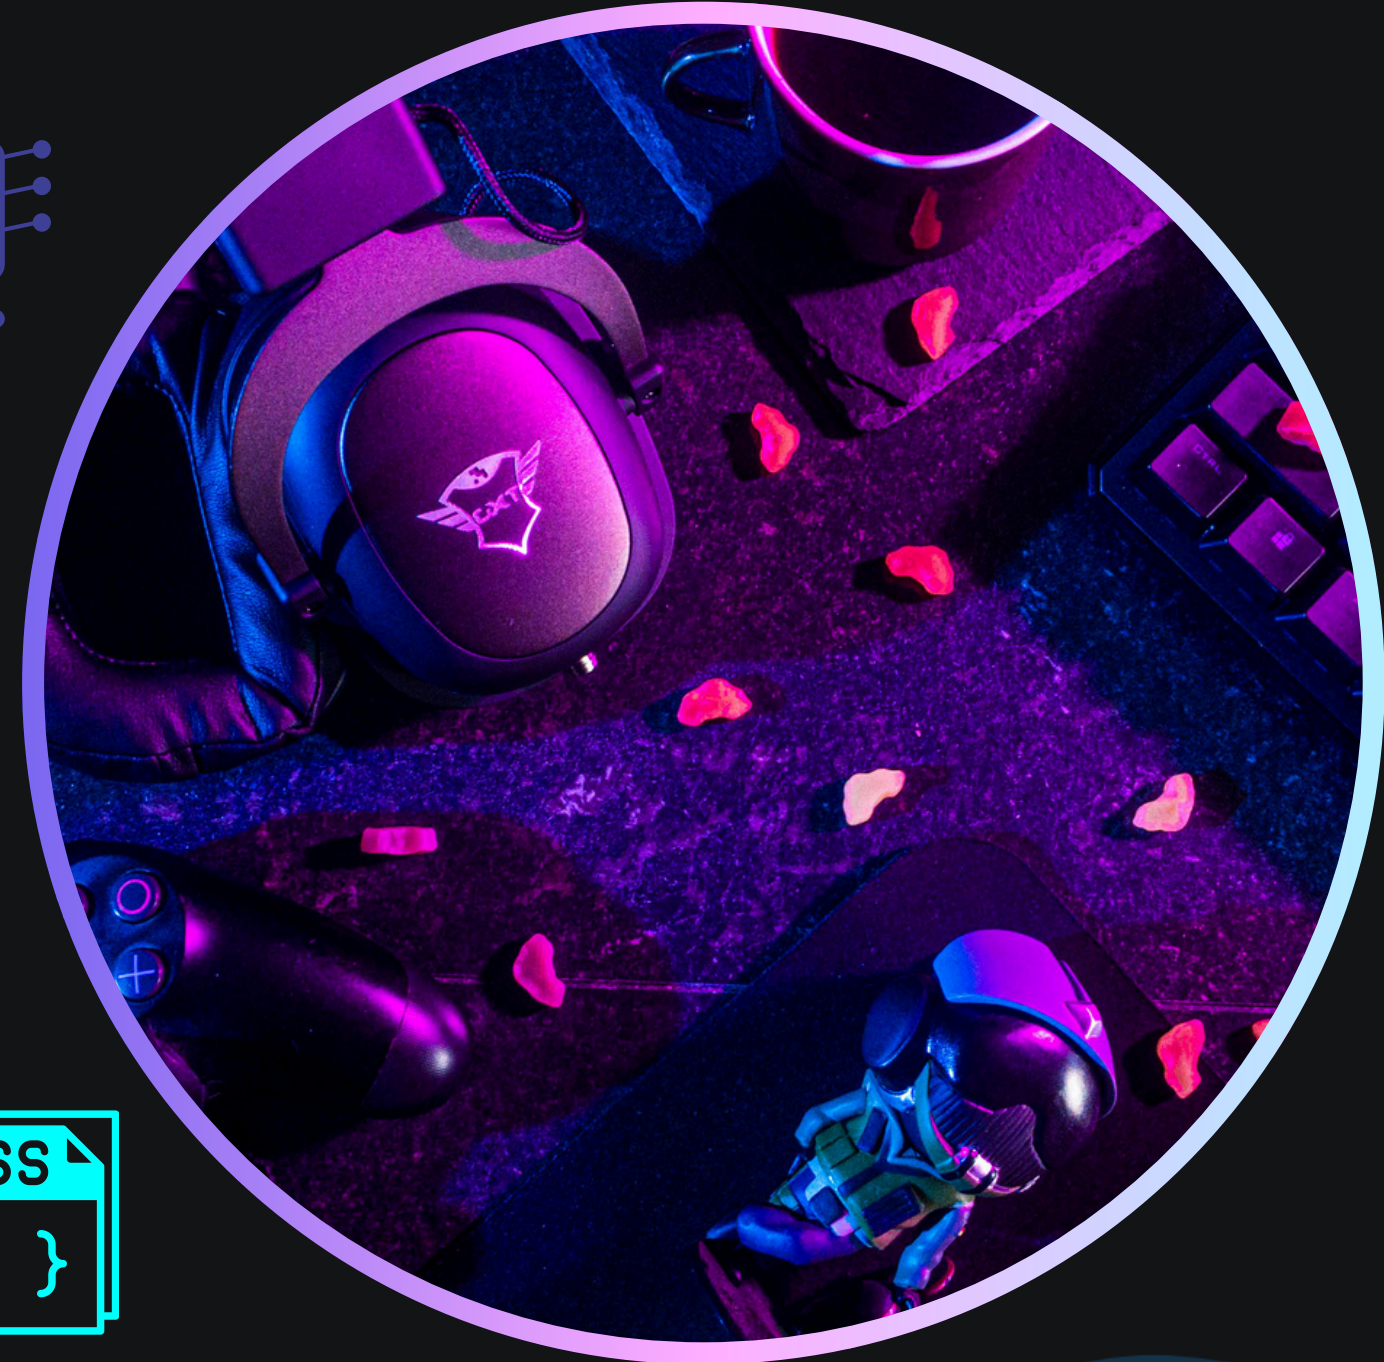

Next Meeting

Let's set a date in the near future. In this meeting, we need to:

1. Specify and adapt the chosen idea to meet the technical requirements of the topic.
2. Decide how we will work together and the frequency of meetings.
3. Divide tasks and assign specific roles.
4. Define how we will write code, which technologies we want to use, and agree on general rules for work structure.

Please make sure that for the next meeting everyone carefully reads the subject and defines what they want to learn and which tools/technologies they want to use.

Thank You
